Final Review Sheet

The final exam will take place on Thursday, December 16, at 11am. It will be open book, notes, handouts, and computer — so we’ll have it at the Keck lab. You can use one computer, either your own laptop or one of the Keck workstations.

Covered Material

The final covers the entire semester, including all handouts and sample code that have been distributed; in addition to the covered material from the midterm (see the Midterm Review Sheet for that), we also have:

- Chapters 5, 6 and 7, and an overview knowledge of Chapters 8 and 9, in Shneiderman/Plaisant
- Chapters 3 and 4 in Norman
- Menu research papers
- Norman’s articles on physicality and the command line as “the next UI breakthroughs”
- Event handling fundamentals
- Direct manipulation implementation (mouse- and touch-driven)

Sample Tasks and Questions

The following represent the types of questions or tasks that you may be asked to accomplish (in addition to those listed in the Midterm Review Sheet):

- Given a proposed application, choose and justify the most appropriate interaction style/paradigm for that application
- Given two alternative user interfaces based on the same interaction style/paradigm for the same application, state which user interface is more effective and why
- Assess the quality of a menu-driven user interface based on the guidelines and principles for creating effective menus, forms, and dialogs
- Assess the quality of a direct manipulation user interface based on the guidelines and principles for creating effective direct manipulation designs
- Break down a user action (drag-and-drop, text field manipulation, button tracking, etc.) into a sequence of low-level input events
- Identify bugs or potential issues in some given fragment of HTML/CSS/JavaScript code
- Identify, describe, or compare the similarities or differences between different types of events, their handlers, and the data they return (i.e., their respective event objects)
- Answer a conceptual or simple analytic question regarding the command line and/or natural language interaction styles
